The challenge – an efficient boiling, chilled and sparkling filtered water system

With over 300 members of staff, it can get very busy in the café area and to keep everyone happy and productive, the facilities team had to think of smart ways to deliver refreshments during peak times. Paul Fraine, the Facilities Manager, eliminated the option of boiling water through kettles and providing bottled water for their staff.

They established their requirements which included boiling, chilled and sparkling water from one tap for all their tea points as well as their reception area where they meet and greet their clients.

Solution

Our popular sparkling systems, combining boiling, chilled and sparkling filtered water through the XL lever dispenser in chrome were the perfect solution, giving the team a wide range of drinks to enjoy on a daily basis. The project was coordinated with Stanway Interiors.

They have also taken out the Billi Gold Maintenance Plan, a planned maintenance agreement covering servicing and filter replacement.

I have done an extensive research into under-counter water systems and we found Billi ticking all the boxes. The instant function makes everyone's life easier, there are no queues in the kitchen and the quality of the filtered water is fantastic.

I am very pleased with the Billi team, they have been brilliant during the installation and their response time is spot on. Boiling, chilled and sparkling water at fingertips has been a smash hit so far!
